VISITOR MANAGEMENT

The need to enhance the company image before visitors and employees often leads to change the processes of interaction between the company and external personnel.

One of these processes is the management of the visits and the monitoring of every person in the company area. Digitronica.IT designed PhotoGuest, the software for visitors management that manages the authorization procedure and keeps track of every visit.

PhotoGuest is an entirely web based product designed to manage visitors who come to the company reception to meet an employee for business reasons, technicians meetings, job interviews, etcetera.

The system records the transit of each visitor in association with the employee who meets him making a database of the visits, and produces, when wanted, a pass for the visitor.

The registration is quick and easy and visitors can register at the reception.

PhotoGuest allows to manage an archive of visitors personal data, where can also be stored the scanned image of their identifications and their photo. This archive eliminates useless paperwork for the habitual visitors, allows to register the casual ones for security reasons, and allows the recovery of data searching by visited persons or frequency of visits in a period of time.

With the visits form every authorised employees can schedule the visits he expects to speed up the authorisation of visitors and the proceedings at the reception. This form then allows to check the history of each visit, searching by period, company, visitor, colleagues who attended the meeting.

As for its scalability PhotoGuest can be used to manage a single reception up to multisite and multiple reception organisations.

PHOTOGUEST

VISITOR MANAGEMENT

TECHNICAL SPECIFICATIONS:

- Available in entirely web based form
- Also ready to work on scalable high availability architectures: CLUSTER and Network Load Balancing
- Form for scheduling visits.
- Recognition of personal identifications by OCR
- Integrated with all Digitronica.IT software: SCS, MultiAccess, ACS, PhotoBase, CarsAccess, RemAccess

MOBILE BARCODE LINK GENERATOR
